

bringing  
design  
to life

Established in 1983, CA Roofing Services has an enviable track record of delivering ground breaking projects for key contractors and forward thinking clients and developers.

We have an unrivalled reputation for high standards of workmanship, innovation and a focus on safety. Our involvement at the concept stage of any project means that delivery on time, and in full, is assured.

CA Roofing Services thrives on meeting challenging and diverse build programmes and we have a proven ability to manage difficult sites and complex designs.

### ***American Express Community Stadium Brighton and Hove Albion Football Club***

Described as one of the most visually appealing sports stadiums in the UK, this state of the art community stadium, which seats 22,500, was a hugely challenging project for the CA Roofing Services team.

The £93 million structure was designed specifically to provide as much natural light as possible for the players. Translucent roof panels, installed in the area above the main stand, were colour matched to the client's exact requirements and these, combined with a reflective silver wall cladding, further enhanced the natural light, creating a unique finish.

Collaboration plays a key role in the success of any CA Roofing Services project. The development of long-term relationships with the main players in the industry ensures partnerships that bring results for everyone involved.

Our expertise enables us to offer advice and recommend solutions, whatever the requirement, while working to time and, crucially, budget.

Every project is allocated a permanent site manager to ensure full compliance with all project requirements. This approach ensures that the complex nature of today's construction and design details are handled with professionalism and efficiency from start to finish.

### ***Amazon Distribution Centre Dunfermline***

Faced with strict time constraints on a project of more than 80,000m<sup>2</sup>, detailed planning of Amazon's Scottish distribution centre was critical.

CA Roofing Services installed a Carbon Neutral<sup>®</sup> built-up roof and wall system incorporating non-flammable man-made mineral fibre insulation which delivered the low U-values demanded by the client.

Despite a two-week weather disruption, the building envelope was completed within the agreed 14 weeks. Lining of the building only took a further eight weeks bringing in the build well ahead of the programmed schedule.

**Energy from Waste (EfW) facility - Great Blakenham, Suffolk**

*"It was a pleasure to work with CA Roofing Services at the Suffolk EfW project. They demonstrated great professionalism throughout the course of the project, which was extremely challenging due to the number of other subcontractors working on the site. The work undertaken was completed to a high standard, on time and to budget."*

**Lagan Construction Limited**

Site access restrictions, material handling issues, strong winds, heights of up to 52m and zero tolerances on panel installation were just some of the challenges to overcome on this joint venture with SUEZ Environnement and Suffolk County Council

Health & Safety was top of the agenda on a complex build in difficult conditions. CA Roofing Services devised a range of intricate and non-standard access solutions utilising Mobile Elevating Work Platforms (MEWP), suspended cradles, specialist scaffolding and a roof level monorail system. Now fully operational, this project was one of the most challenging ever undertaken by CA Roofing Services.

**F**rom apprentices to directors our employees make CA Roofing Services the company it is today.

Investment in training and development is ongoing for everyone. With low staff turnover and many long serving employees, we demonstrate an ongoing commitment to the wellbeing of our workforce. A robust apprenticeship academy, combined with in-house mentoring schemes, help guarantee the future of the company. As an Employee Benefit Trust each and every member of staff has a share in the business and a “can do” attitude runs throughout the CA Roofing Services team.

*DP World  
London Gateway Logistics Park*

Architectural aspirations played a large part in the design and build of this 316,000 square foot distribution facility in one of Europe’s largest multi-modal logistics hubs.

The warehouse was constructed with the potential to be adapted for multiple use, including chill store, and, along with 10,000 square foot of office space, the building envelope was designed to achieve the best possible Energy Performance Certificate (EPC) for its size.

With profile specifications including trapezoidal, half round and microrib the finished result provides an aesthetically stunning building envelope.

**D**elivery of efficient and sustainable buildings has resulted in CA Roofing Services winning many accolades, awards and repeat business. We provide clients practical, cost saving solutions and our meticulous attention to detail, during the design and build process, ensures the finished building is practical, aesthetically pleasing and energy efficient.

Many of our complete building envelope projects have been rated "Outstanding" by BREEAM and high levels of air tightness are achieved consistently through high quality workmanship.

Enhancing the green credentials of our clients, is just part of the CA Roofing Services offer.

### *Marks & Spencer Distribution Facility Castle Donington*

In line with its Plan A strategy, M&S required high levels of efficiency from its new distribution centre. From being Carbon Neutral® to having exceptional air tightness, sustainable design played a huge part in the build process.

CA Roofing Services installed the world's largest SolarWall® Transpired Solar Collector, as a renewable heat solution, which saves the client more than 1.1million kWh of energy and 251 tonnes of CO<sub>2</sub> per annum.

CA Roofing Services delivered a cost effective, sustainable building that, at the end of its life, will present no disposal issues.
